Family finances

Quick guide · household finances month by month

Your data, only on your phone. No sign-up and no server: what you write is saved on your phone and nobody else sees it. Only if you turn on sync with your partner is it shared, encrypted, with whoever has your family code.

1. Put it on your home screen

Open the link `moxetas.github.io/finanzas-familiares/` on your phone. No app store needed: it installs from the browser in a few seconds.

📱 iPhone

1. Open the link in **Safari**.
2. Tap **Share** (the square with the arrow pointing up, at the bottom in the middle; on some iPhones it is behind ⋯).
3. Scroll down and tap **“Add to Home Screen”**.
4. Tap **“Add”** at the top right.

🤖 Android

1. Open the link in **Chrome**.
2. If the **“Install”** prompt appears, tap it.
3. If not, tap the menu ⋮ (top right) → **“Install app”** or **“Add to Home screen”**.
4. Confirm with **“Install”**.

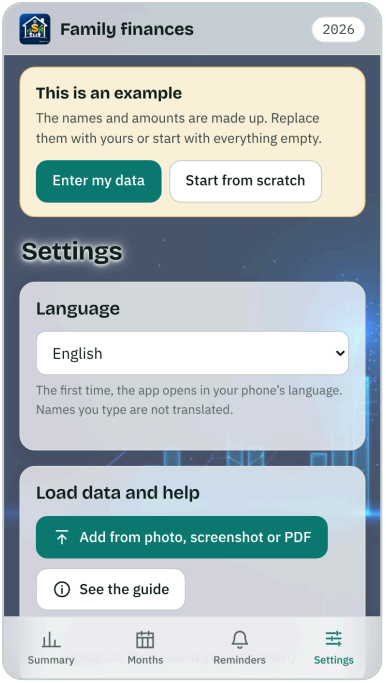

The icon appears like any other app. **Always open it from the icon**: it goes full screen, works without signal and that is how you get the reminders.

2. Get started

The first time you will see a **made-up example** and this guide, in your phone’s language. Choose:

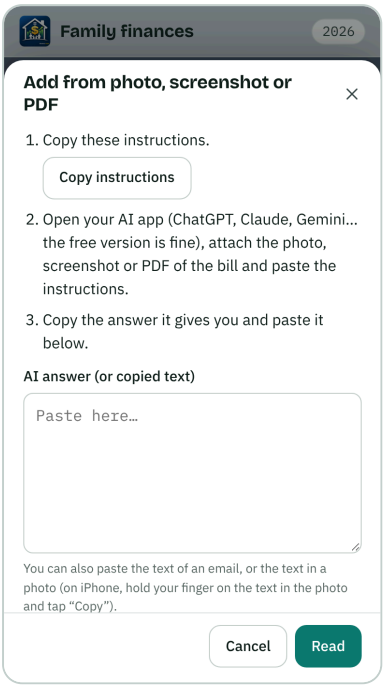

- **Start from scratch**: the app empty, with one account.
- **Enter my data**: you replace the example with your own data.

3. Enter your data in Settings (just once)

1. **Language**: at the very top. Each phone can have its own.
2. **Accounts**: where your money is (bank, savings, cash...) with what is there today. The name is enough: *never write account numbers*. Drag ≡ to put them in order.
3. **Monthly items**: salary, rent or mortgage, electricity, phone, childcare... They repeat every month on their own. You can set from which month to which month.
4. **Payments that are not monthly**: insurance, taxes, quarterly bills... with their date. The app reminds you a week before and the day before.
5. **Year to plan**: the year you want to see.

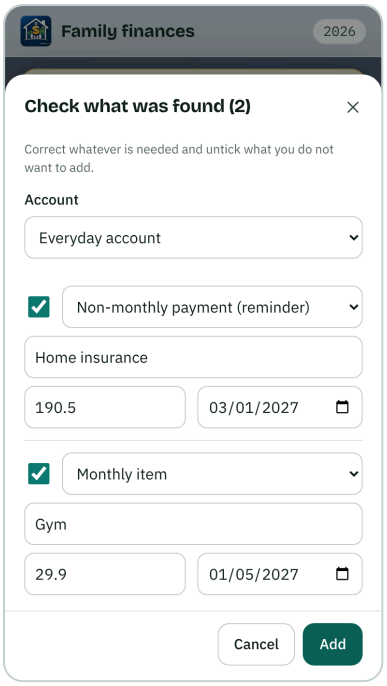

4. Do your bills come as photos, screenshots or PDFs?

No need to type them. In **Settings**, **Reminders** or **Months** tap **"Add from photo, screenshot or PDF"**:

1. Tap "Copy instructions".
2. Open your AI app (ChatGPT, Claude, Gemini... **the free version is fine**), attach the photo, screenshot or PDF and paste the instructions.
3. Copy its answer and paste it into the app. Tap "Read".

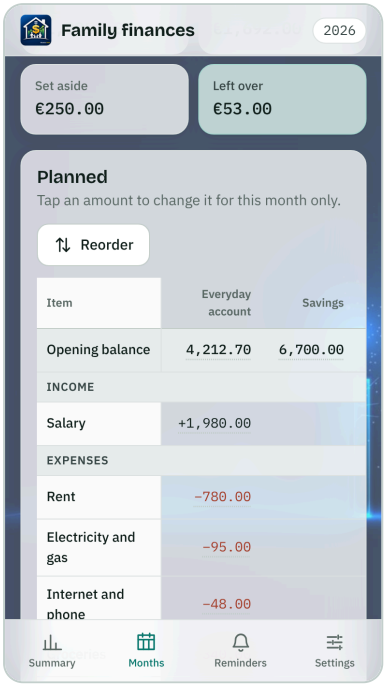

You can also paste the **text of an email**, or the text in a photo: on iPhone, hold your finger on the text in the photo and tap "Copy".

The app shows you what it found. Check the type, item, amount and date, untick what you do not want and tap **“Add”**.

The app sends nothing anywhere: only the AI you choose sees the photo, with your account.

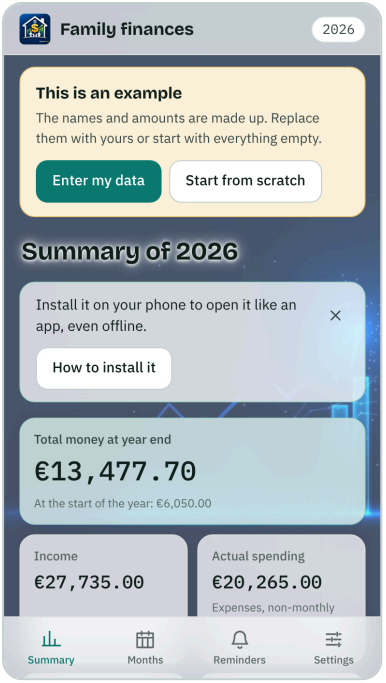

5. Every month, in Months

Each month is like a spreadsheet: one row per item and one column per account.

- **Tap a figure** to change it for that month only (January’s electricity, your real salary…).
- **Reorder**: drag ≡ to put the items in the order you want, like in your spreadsheet.
- **Actual balances at month end**: note what is really in the bank at the end of the month. The next month starts from there.
- **Entries this month**: unexpected expenses or income.

6. Summary and Reminders

- **Summary**: how much you will have at the end of the year, income, actual spending, what you set aside and what is left over, with charts and the month-by-month table.
- **Reminders**: the payments coming in the next few days. You can get them on your phone and add them to your calendar.

7. Share with your partner (optional)

In **Settings** → **Sync with other phones**, create a family code and give it to them. You will both see the same, each in your own language. The data travels **encrypted**: without the code nobody can read it. Do not share the code with anyone else.

8. Save a backup now and then

In **Settings** → **Backup** → **Export backup (JSON)**. If you delete the browser data or change phone without a backup (and without sync), it is lost.

More tabs: **Direct debits** (which bills each bank pays) and **Salaries** (your pay slips and their average). Turn them on in Settings if you want to use them.
